

*Physical Security Enhancement
Scenario #1*

Amtrak proposes to use Transit Security Grant Program (TSGP) funds to install physical security enhancements in Union Station, located in Washington, D.C. The project would involve the installation of panoramic Closed Circuit Television (CCTV) cameras, three (3) in the main hall and six (6) in the rail yard to provide Station Security with increased visibility throughout the facility. In addition, the project proposes to add bollards in front of the station to prevent intrusions by unauthorized vehicles.

The Station is listed on the National Register of Historic Places, and was originally constructed in 1908. It has been renovated multiple times, and is in a densely developed urban area.
